Primary Care for the 21st Century

Ensuring a Quality, Physician-led Team for Every Patient

The U.S. is moving to a new primary care model built around patients and delivered by teams, known as the Patient-Centered Medical Home (PCMH).

What is it?

- Each person has an ongoing relationship with a personal physician who provides continuous, comprehensive care
- Physician leads a team of professionals to care for patients

- Personal physician coordinates with other health care providers within the PCMH and across the complex health care system
- Quality and safety are hallmarks, and patients and their families actively participate in decision making

 Enhanced access to care through open and same-day scheduling, expanded clinical hours, and new options for communication

Can a nurse lead the team?

Nurses are vital members of the team, but **nurse**

doctor

Doctors bring broader and deeper expertise to the diagnosis and treatment of all health problems. Doctors are trained to provide complex diagnoses and develop comprehensive plans to treat them.

3 out of 4

patients prefer to be treated by a physician even if it takes longer to get an appointment and even if it costs more.²

Why do we need it?

- Fewer emergency room visits
- Fewer hospital admissions and readmissions
- Shorter hospital stays3

How do we make the PCMH a reality for everyone?

We have to fix the primary care workforce shortage.

45,000 too few primary care physicians by 20204

AND

260,000

too few registered **nurses** by 2025⁵

We need more doctors, and we need more nurses, and we need them working together in teams.

Studies show the ideal practice ratio of nurse practitioners to physicians is approximately **4 to 1**.⁶ At this ratio, everyone can have a physician-led team, and the primary care shortage can be eliminated.

• Increase federal funding for primary care physician education.

Help medical students pay back or defray medical school debt.

 Improve primary care physician payment so students will consider primary care careers.
